

Environnement :**1- oiseau :** <http://www.quebecscience.gc.ca/Environnement/Un-milliard-d-oiseaux-disparus>

Un milliard: c'est le nombre d'oiseaux disparus en Amérique du Nord, lorsqu'on compare les populations de 1970 à celles de 2014, selon un rapport produit par des responsables gouvernementaux et des activistes canadiens et états-uniens, [Partners in Flight](#).

Par exemple, on trouve aujourd'hui 64% moins de harfang des neiges qu'à l'époque.

L'effritement des habitats engendré par l'urbanisation et la croissance de l'agriculture est en cause, et les changements climatiques aussi, possiblement.

"Je ne veux pas que mes petits-enfants sortent en forêt et n'entendent pas le chant des oiseaux au printemps, mais ça semble être vers cela qu'on se dirige", [a dit au Globe and Mail le coauteur Andrew Couturier](#), analyste chez [Études d'oiseaux Canada](#).

La solution? Réaliser rapidement de grands efforts de conservation, particulièrement au Canada, un important territoire de nidification.

2- Wind <http://www.radiokerry.ie/calls-made-cost-benefit-analysis-spending-wind-energy/>**Calls made for cost benefit analysis of spending on wind energy** By [radiokerrynews](#)

- 17th July 2017

Calls are being made for a cost benefit analysis of spending on wind energy.

It comes ahead of a decision on August 1st by the Commission for Energy Regulation on setting the Public Service Obligation from October to September 2018.

The proposal would see a 40% increase in the PSO levy for domestic customers from €80 to €112 per year while the levy for small businesses would increase by 39% from €282 to €392 annually. There would also be a 12% increase year on year on the levy for medium/large businesses.

The levy was introduced in 2003 to support the generation of renewable electricity with the majority going to the wind energy sector.

Wind Aware Ireland's aim is to reform the Government's wind energy policy

The group's PRO Paula Byrne spoke on Kerry Today earlier:

3- ÉO- Irlande : <http://www.munster-express.ie/community-notes/minister%E2%80%99s-warning-to-councils-that-reject-wind-farm-guidelines/>**Minister's warning to Councils that reject wind farm guidelines**

By Kieran Foley. Published on Wednesday, August 16th, 2017 at 2:18 pm

COUNCILS across Ireland have been warned about the consequences of disregarding national guidelines on wind farms.

Environment Minister Eoghan Murphy has written to all local Councils telling them that if they disregard national guidelines on wind farms, he will consider using his powers to overrule them.

A planning circular letter was distributed to high-ranking officials in Councils last week in relation to wind farm guidelines.

In the letter, Minister Murphy threatens to use his powers under Section 31 of the Planning and Development Act to revoke any local plan which he believes improperly blocks wind development.

Millions of Americans have been awakened to the diabolical falsehoods that proclaim the same mantra over and over; if our carbon output increases, the imminent destruction of our planet is at hand. But those who know better have heartstrings that are not pulled when bought and paid for scientists and politicians feign sympathy for third world nations and coastlines teeming with poor people who will starve, drown or become climate refugees unless we drastically reduce our carbon footprint. The enlightened observer may only give scant attention to [these fifty-eight scientific papers published in 2017](#) which "invalidate the claims of unprecedented global-scale modern warming," as reported by [Notrickszone.com](#).

But maybe these charts and accompanying data can be shared with your [brainwashed friends and family sheeple](#) who've been hoodwinked by this insidious plan. They just don't know, as [Joannenova.com](#) reports, that [the trillion dollar climate change racket](#) is the "only major industry in the world dependent upon consumer and voter ignorance." Ms. Nova asks some important questions:

"What if they [the believing public] learned that the climate models are unskilled, broken, and non-functional, or that 28 million weather balloons show carbon reduction is a fruitless pursuit? What if they knew historic records are wildly adjusted to make the current weather look warmer than it would?"

By [Kenneth Richard](#) on 29. May 2017

**Scientists Increasingly Discarding
'Hockey Stick' Temperature Graphs**

Now Updated: [300 Non-Hockey Stick Graphs](#)

"[W]hen it comes to disentangling natural variability from anthropogenically affected variability the vast majority of the instrumental record may be biased." — [Büntgen et al., 2017](#)

Last year there were **at least 60** peer-reviewed papers published in scientific journals demonstrating that [Today's Warming Isn't Global, Unprecedented, Or Remarkable](#).

Just within the last 5 months, 58 more papers and 80 new graphs have been published that continue to undermine the popularized conception of a slowly cooling Earth temperature history followed by a dramatic hockey-stick-shaped uptick, or [an especially unusual global-scale warming during modern times](#).

6-- : <http://newstarget.com/2017-09-10-175-patents-prove-that-geoengineering-and-weather-control-technologies-are-real.html>

175 U.S. patents prove that geoengineering and weather control technologies are REAL...

see the list here Sunday, September 10, 2017 by [Mike Adams](#)

The United States government has granted patent approval to at least 175 inventions and technologies that are officially recognized to control or augment weather systems. (See the full list below.)

For years, Dane Wigington, the founder of [GeoengineeringWatch.com](#), has been mocked by the fake news media for daring to claim that weather control technology exists. Now, with two back-to-back superstorms targeting the United States of America in less than two weeks — Hurricane Harvey and Hurricane Irma — more and more people are beginning to ask whether these storms are being influenced, augmented or even "steered" into their intended targets through the use of exotic technologies.

7- <http://joannenova.com.au/2015/07/spot-the-vested-interest-the-1-5-trillion-climate-change-industry/>

Spot the Vested Interest: The \$1.5 Trillion Climate Change Industry

Climate Change Business Journal estimates the Climate Change Industry is a \$1.5 Trillion dollar escapade, which means four billion dollars a day is spent on our quest to change the climate. That includes everything from carbon markets to carbon consulting, carbon sequestration, renewables, biofuels, green buildings and insipid cars. For comparison global [retail sales online are worth around \\$1.5 trillion](#). So all the money wasted on the climate is equivalent to all the goods bought online.

The special thing about this industry is that it wouldn't exist if it weren't for an assumption about relative humidity that is probably wrong. As such, it's the only major industry in the world dependent on consumer and voter ignorance. This is not just another vested interest in a political debate; it's vested-on-steroids, a mere opinion poll away from extinction. You can almost hear the captains of climate industry bellowing: "Keep 'em ignorant and believing, or the money goes away!"

To state the obvious:

Policy, or the anticipation of new policy, has been one of the biggest drivers of the industry, the report shows.

8- The REAL goal of climate change alarmism is to achieve global food scarcity, mass human poverty and depopulation

Wednesday, June 21, 2017 by [Isabelle Z.](#)

A lot of scientists have been scratching their heads over some of the claims of climate change activists. After all, the results that we'd get from following their advice and getting rid of carbon dioxide, for example, completely fly in the face of their stated goal of making the earth greener. How is it that they can espouse something that would actually have the opposite of its intended effect? There really is only one explanation that makes sense: A greener Earth isn't really what they want.

What makes the tropical rainforest so lush and brimming with life? If you answered "the rain," you'd be correct, but have you ever thought about where rain comes from? It's a complex process, but it essentially comes from water that has been evaporated from oceans and then distributed by the wind according to the influence of various pressure systems. It doesn't take an environmental science degree to know that this evaporation is caused by warm temperatures. Therefore, it stands to

reason that when the planet is warmer, it's going to be inevitably wetter, which means more water will evaporate from the oceans and fall onto Earth to help [grow food crops and forests](#).

Trump pulls U.S. out of “non-binding” Paris Climate Accord — Here’s why he was right to do it

Thursday, June 01, 2017 by: [JD Heyes](#)

Tags: [Paris Climate Accords](#), [President Donald J. Trump](#), [withdraw](#)

([Natural News](#)) Far-Left Democrats and so-called “environmentalists” who still believe [the global warming hoax](#) are furious at President Donald J. Trump for keeping his campaign pledge to withdraw the United States from the “non-binding” Paris Climate Accords signed onto by the Obama administration. But perhaps after they calm down and allow their blood pressure to return to normal, they can take a rational, reasoned look at why the president made his decision; if they afford him that courtesy, there is no way they can conclude that his decision was wrong.

In making the announcement from the White House Rose Garden Thursday afternoon, Trump stated that he felt obligated to withdraw from the agreement — which *should have been* sent to the U.S. Senate by Obama to be ratified as a treaty, because that’s what it was, in both style and substance — because it is “a bad deal” for American workers, taxpayers and companies. (RELATED: [The Paris Climate Accord is GENOCIDE against plants, forests and all life on our planet](#))

Trump also knocked the cost of the agreement — which will rise to some \$450 billion a year, much of which would have to come from the U.S.

Eoliennes et climat: vers la fin d'un modèle ? Jean Pierre Riou Partie 1

Energiewende : la fin des ambitions

En 2014, le vice Chancelier Allemand Sigmar Gabriel, ministre de l'économie et de l'énergie [déclarait déjà](#) :

« La vérité est que la transition énergétique [« Energiewende », le plan allemand visant à faire passer la part de la production « renouvelable » d'électricité à 80% en 2050] est sur le point d'échouer. La vérité est que, sous tous les aspects, nous avons sous-estimé la complexité de cette transition énergétique.

La noble aspiration d'un approvisionnement énergétique décentralisé et autonome est bien sûr une pure folie !

Quoi qu'il en soit, la plupart des autres pays d'Europe pensent que nous sommes fous. »

Dans son rapport [« Transition énergétique allemande : la fin des ambitions ? »](#) France Stratégie stigmatise l'échec climatique de l'Allemagne malgré son développement spectaculaire des énergies renouvelables.

Quelques jours plus tard, c'est la [Cour des Comptes européenne qui fustigeait](#) ce développement des énergies renouvelables et en dénonçait les coûts et l'inefficacité.

Les rapports s'accumulent désormais pour établir que le bilan climatique de cette politique est [pire encore](#) qu'on le craignait, [malgré les milliards d'euros qui lui ont été consacrés](#).

<http://lemontchampot.blogspot.ca/2017/09/>

11- [L'éolien selon l'Ademe](#)

L'Agence de l'Environnement et de la Maîtrise de l'Énergie (Ademe) vient de publier un rapport sur les vertus de l'énergie éolienne.

Les retombées fiscales pour les collectivités territoriales y sont détaillées, notamment à travers le graphique ci dessous.

Ces alléchants revenus, multipliés par les 12 278 MW actuellement installés sur le territoire, correspondant ainsi à une manne de **152 millions d'euros par an**.

Malheureusement, cette somme correspond strictement au 1/10° de celle prélevée chaque année aux ménages, à travers la CSPE, qui finance le seul surcoût des tarifs préférentiels accordés à cette filière, soit **1513 millions d'euros en 2018** comme le montre la [délégation de la Commission de Régulation de l'Énergie](#) (CRE) publiée en juillet dernier.

Verser dans une poche le dixième de ce qui a été prélevé dans l'autre est il bien une opération à mettre au crédit de cette filière ?

Cette CSPE ne représentant d'ailleurs que la partie émergée des charges supplémentaires liées au développement de l'intermittence, ainsi que nous l'avons déjà évoqué dans "[Le prix de l'intermittence](#)".
